

Abstract of the Disclosure

*See Cl 7* Compounds that inhibit the activity of NF- $\kappa$ B or inhibit the activity of the proteasome or both promote bone formation and hair growth and are thus useful in  
5 treating osteoporosis, bone fracture or deficiency, primary or secondary hyperparathyroidism, periodontal disease or defect, metastatic bone disease, osteolytic bone disease, post-plastic surgery, post-prosthetic joint surgery, and post-dental implantation; they also stimulate the production of hair follicles and are thus useful in stimulating hair growth, including hair density, in subject where this is desirable.
